Budapest, August 25, 2006

Dear All,

I would like to draw your attention to the **PhD Program in Mathematics and Its Applications** of the **Central European University (CEU)** in Budapest (see www.ceu.hu/math).

This is a strong international program (in English), which is accredited in the USA. Consequently, our PhD is recognized throughout the world.

The program is carried out jointly with the Renyi Institute of the Hungarian Academy of Sciences. We also have cooperative agreements with other institutions from abroad. Outstanding foreign scholars are regularly invited to deliver lectures for our students. For example, last academic year, Professor **H. Brezis** (Paris VI, France) delivered lectures here, and for this Fall we have invited Professor **C. Corduneanu** (University of Texas at Arlington) to give a course.

The CEU stipend offered to our PhD students is more than enough to cover all their expenses. Also, there are very good facilities for studying at CEU (good libraries, computer labs, etc.). In addition, good students are encouraged to spend time abroad while supported by CEU.

I would like to invite candidates from around the world to apply to our PhD program. For information on admission see <http://www.ceu.hu/math/ProsStud/prospective.html> as well as the related web pages indicated there.

Sincerely yours,

Gheorghe Morosanu

P.S. Please show this message to potential candidates, including advanced students, who might be interested in applying to our PhD program.
